Description:

The goal of an integral psychology is to honor and embrace every legitimate aspect of human consciousness under one roof. This book presents one of the first truly integrative models of consciousness, psychology, and therapy. Drawing on hundreds of sources—Eastern and Western, ancient and modern—Wilber creates a psychological model that includes waves of development, streams of development, states of consciousness, and the self, and follows the course of each from subconscious to self-conscious to superconscious. Included in the book are charts correlating over a hundred psychological and spiritual schools from around the world, including Kabbalah, Vedanta, Plotinus, Teresa of Ávila, Aurobindo, Theosophy, and modern theorists such as Jean Piaget, Erik Erikson, Jane Loevinger, Lawrence Kohlberg, Carol Gilligan, Erich Neumann, and Jean Gebser. Integral Psychology is Wilber's most ambitious psychological system to date and is already being called a landmark study in human development.

This is the most comprehensive view of the field of psychology that I have come across. Wilber's a bit too critical of systems theory, but shows how various psychological paradigms fit together nicely in a complementary way. Additionally, he opens higher levels of consciousness as legitimate topics for scientific research, and although he doesn't mention them specifically, I can see how paranormal and near-death studies can formally enter into legitimate psychological study.
